

Now Enrolling: The Axial Study

A study to analyze the effectiveness of an investigational medication to potentially improve irritability and anxiety associated with autism spectrum disorder (ASD).

We are currently enrolling adolescents ages 13 to 17 to participate in a clinical study that is investigating a medication designed to remove bacterial chemicals produced in the gut that may reach the brain resulting in characteristics associated with ASD.

The purpose of this study is to evaluate the safety and effectiveness of an investigational medication to potentially improve symptoms associated with ASD such as irritability and anxiety and evaluate changes in sleep, quality of life, and gastrointestinal (GI) symptoms.

STUDY PARTICIPATION WILL INVOLVE:

- 1 Screening visit to determine eligibility
- (4) In-person and 3 phone call visits during study treatment
- (1) Follow-up visit at our campus
Total of (6) in-person visits and (3) phone calls
- Study participants will take an oral study medication for 8 weeks
- Study participants will receive \$50 per in-person visit

ELIGIBILITY REQUIREMENTS INCLUDE:

- Ages 13-17 (both males and females)
- A professional autism spectrum disorder diagnosis
- Presence of GI symptoms

In-person visits take place at SARRC's campus located at 2225 N 16th St
Phoenix, AZ 85006
