## Now Enrolling: The Tapestry Study

*A study to analyze the effectiveness of an investigational medication to potentially improve irritability and anxiety associated with autism spectrum disorder (ASD).*

We are currently enrolling adolescents ages 13 to 17 to participate in a clinical study that is investigating a medication designed to remove bacterial chemicals produced in the gut that may reach the brain resulting in characteristics associated with ASD.

The purpose of the Tapestry Study is to evaluate the safety and effectiveness of an investigational medication to potentially improve symptoms associated with ASD such as irritability and anxiety and evaluate changes in sleep, and quality of life.

### STUDY PARTICIPATION WILL INVOLVE:

- 1 Screening visit to determine eligibility
- (4) In-person and 3 phone call visits during study treatment
- (1) Follow-up visit at our campus  
*Total of (6) in-person visits and (3) phone calls*
- Study participants will take an oral study medication for 8 weeks
- Study participants will receive \$50 per in-person visit

### ELIGIBILITY REQUIREMENTS INCLUDE:

- Ages 13-17 (both males and females)
- Demonstrates irritability
- A professional autism spectrum disorder diagnosis

In-person visits take place at SARRC's campus located at 2225 N 16th St  
Phoenix, AZ 85006
