Potential Treatment for Social Difficulties

Sponsored by Yamo Pharmaceuticals

This study will evaluate an investigational medication to improve social communication and interactions in adolescents and young adults with autism spectrum disorder (ASD).

Social communication difficulties are a core symptom of ASD. The investigational medication could potentially improve social communication skills in adolescents and young adults with ASD.

In this study, all participants will receive the study medication for a period time, either at the beginning or the end of the study period.

STUDY PARTICIPATION INVOLVES:

Participation includes a total of 10 in-person study visits and 4 phone calls.

- 1 in-person screening visit
- 8 in-person visits during treatment
- 4 phone call visits
- 1 in-person follow up

ELIGIBILITY REQUIREMENTS INCLUDE:

- Ages 12-21 (both males and females)
- Individual must have an autism diagnosis

In-person visits take place at
SARRC's campus located at:
2225 N 16th St Phoenix, AZ 85006
